

ABSTRACT OF INVENTION

The entire invention consists of three (3) components, The Invention-The Mini-Sweep (pg 17, Figure A), a small object lifting tool-The Mini-Lifter and a storage or mounting bracket. The process to assemble the parts is as follows: The handle (pg 17, Figure A, Item 2) is comprised of four parts. Pin (Figure A) item 4 is inserted into item 2. Item 4 is inserted into item 3 which is attached to item 1. The small object lifting tool (pg 19, Figure B) has four (4) parts. Item 4 is inserted into item 2, which is inserted into item 1. Item 3 is inserted through items 1,2 and 4. The storage bracket (pg 21, Figure C) is a single piece.

The invention is simple in manufacture and end-use. It is comprised of any high-impact resistant plastic, resin or similar material which may be manufactured through injection or blow molding processes. With a minimal of simple parts it is inexpensive to manufacture and assemble. Detailed description and other specifics for each component are detailed on page 6.
